flow

In audio things become audible that would otherwise pass unnoticed, such as the quality of solder joints. While in their case one has to rely on what one gets (Ensemble equipment is hand-soldered with the greatest professional care), cable connections are open to the way the user goes about them.

To secure the best audio results over a long period of time, contacts must be clean and have to be protected from oxidization.

CONTA+ not only stabilizes the surface of electrical contacts in the long term but also enhances their performance. CONTA+ has other important plus points:

Instantly filling up the smallest gaps, it does not clog, nor does it aggress gold- or silver platings, and it is non-toxic. CONTA+ can be used on all cable contacts.

It comes with a flask of isopropyl alcohol for cleaning the contacts and a pack of high-quality (clean room type) foam swabs. Use one swab for cleaning, and another to apply **CONTA+**.

All Ensemble products are assembled with the internal electrical contacts treated with CONTA+. This is part of the comprehensive Ensemble concept to assure superlative performance and long-term satisfaction.

MAKE SURE THAT ALL CABLES TO BE TREATED ARE UNPLUGGED.
